Subject Index of Volume 239

Adhesion
  morphologies and adhesion strength of diamond films deposited on WC-6%Co cemented carbides with different surface characteristics, 47
Adsorption
  conductivity and gas species content of $(AlPcF)_n$ thin films exposed to O_2 or NO_2, 161
Alloys
  study of Co–Cr films deposited by magnetron sputtering under different nitrogen partial pressures, 1
Aluminium
  localized corrosion of sputtered Al–1wt.%Si–0.5wt.%Cu alloy thin film, 74
Aluminium nitride
  application of multiple coatings to protect polyimide-based X-ray windows form eroding oxygen attack, 259
Aluminium oxide
  Al_2O_3 coatings against high temperature corrosion deposited by metal–organic low pressure chemical vapour deposition, 31
Amorphous materials
  amorphous Zn_3P_2 thin films grown by reactive r.f. sputtering, 205
  Ni–Cu–P and Ni–Co–P as a diffusion barrier between an Al pad and a solder bump, 93
Anodic oxidation
  ionic conduction in anodic oxide films on titanium in mixed solutions of aqueous electrolytes and diethylene glycol, 99
  localized corrosion of sputtered Al–1wt.%Si–0.5wt.%Cu alloy thin film, 74
Atomic and molecular beam studies
  application of multiple coatings to protect polyimide-based X-ray windows form eroding oxygen attack, 259
Atomic force microscopy
  organic superlattice film by alternate deposition of single molecular layers, 214

Biomaterials
  immobilization of alcohol dehydrogenase enzyme in a Langmuir–Blodgett film of stearic acid: its application as an ethanol sensor, 138
Boron carbide
  characterization of WC_x/B_4C multilayers sputtered in reactive argon/methane atmospheres, 57

Cadmium
  transparent conducting cadmium oxide thin films prepared by a solution growth technique, 211
Carbides
  morphologies and adhesion strength of diamond films deposited on WC–6%Co cemented carbides with different surface characteristics, 47
Chemical vapour deposition
  Al_2O_3 coatings against high temperature corrosion deposited by metal–organic low pressure chemical vapour deposition, 31
  application of pyrosol deposition process for large-area deposition of fluorine-doped tin dioxide thin films, 150
  effect of deposition orientation on the structure and magnetic properties of chemical vapour deposited iron oxide thin films, 240
  influence of substrate on structural properties of TiO_2 thin films obtained via MOCVD, 186
  modelling of silicon epitaxy at low pressure, 225
  morphologies and adhesion strength of diamond films deposited on WC–6%Co cemented carbides with different surface characteristics, 47
Chemisorption
  conductivity and gas species content of $(AlPcF)_n$ thin films exposed to O_2 or NO_2, 161
Chromium
  phase formation in coevaporated Ni–Cr thin films, 37
Clusters
  evolution processes in multicomponent and multiphase film growth from solutions, 16
Cobalt
  influence of base pressure on structure and magnetoresistance in sputter-deposited Co/Cu metallic multilayers, 229
Conductivity
  ionic conduction in anodic films on titanium in mixed solutions of aqueous electrolytes and diethylene glycol, 99
  on the Van der Pauw method of resistivity measurements, 272
  vinyl functionalized Langmuir–Blodgett films fabricated from electrically conductive poly (bromooctylthiophene-co-vinylhexylthiophene), 144
Copper
  deposition of copper oxide films by reactive laser ablation of copper formate in an r.f. oxygen plasma ambient, 8
  influence of base pressure on structure and magnetoresistance in sputter-deposited Co/Cu metallic multilayers, 229
Corrosion
  Al_2O_3 coatings against high temperature corrosion deposited by metal–organic low pressure chemical vapour deposition, 31
  localized corrosion of sputtered Al–1wt.%Si–0.5wt.%Cu alloy thin film, 74
Crystallization
  evolution processes in multicomponent and multiphase film growth from solutions, 16

Deposition process
  deposition of copper oxide films by reactive laser ablation of copper formate in an r.f. oxygen plasma ambient, 8
  transparent conducting cadmium oxide thin films prepared by a solution growth technique, 211
  XRD, XPS, optical and electrical studies on the conversion of SnS thin films to SnO_2, 85
Diamond
  morphologies and adhesion strength of diamond films deposited on WC–6%Co cemented carbides with different surface characteristics, 47
Diffusion
  Ni–Cu–P and Ni–Co–P as a diffusion barrier between an Al pad and a solder bump, 93

Electrical properties and measurements
  on the Van der Pauw method of resistivity measurements, 272
  photoinduced doping of thin amorphous WO_3 films, 156
Electrochemistry
  high frequency impedance analysis of quartz crystal microbalances coated with conducting polymers, 196

Electron microscopy
characterization of WC_x/B_4C multilayers sputtered in reactive argon/methane atmospheres, 57
Epitaxy
modelling of silicon epitaxy at low pressure, 225

Fluorine
thermoplastic and spectroscopic properties of amorphous fluoropolymer thin films, 27
Fourier transform infrared spectroscopy
infrared response of lead phthalocyanine thin films to chlorine and iodine doping, 268
vinyl functionalized Langmuir–Blodgett films fabricated from electrically conductive poly (bromooctylthiophene-co-vinylhexylthiophene), 144

Grain boundary effect
grain boundary effect in polycrystalline ZnTe films, 104
Growth mechanism
study on WSi_2 thin films, formed by the reaction of tungsten with solid or liquid silicon, by rapid thermal annealing, 251
study of Co–Cr films deposited by magnetron sputtering under different nitrogen partial pressures, 1

Hardness
properties of thin films of tantalum oxide deposited by ion-assisted deposition, 181
Heteroepitaxy
high-temperature stability of heteroepitaxial Ir-silicide/SiGe layers co-deposited on Si(100) under ultra-high vacuum, 112

Indium
study of UV light blocking filter materials for ultrasoft X-ray emission spectroscopy of sputtered thin films, 175
Interfaces
analysis of Ni/Ti multilayers by X-ray diffraction, 79
Ion bombardment
control of Y_2O_3-stabilized ZrO_2 thin film orientation by modified bias sputtering, 123
properties of thin films of tantalum oxide deposited by ion-assisted deposition, 181
Iron oxide
effect of deposition orientation on the structure and magnetic properties of chemical vapour deposited iron oxide thin films, 240

Langmuir–Blodgett films
immobilization of alcohol dehydrogenase enzyme in a Langmuir–Blodgett film of stearic acid: its application as an ethanol sensor, 138
oscillator approach in the mean field model of the highly ordered Langmuir monolayer, 127
vinyl functionalized Langmuir–Blodgett films fabricated from electrically conductive poly (bromooctylthiophene-co-vinylhexylthiophene), 144
Laser ablation
deposition of copper oxide films by reactive laser ablation of copper formate in an r.f. oxygen plasma ambient, 8
preparation of tungsten disilicide thin films by laser evaporation, 192
Liquid phase epitaxy
evolution processes in multicomponent and multiphase film growth from solutions, 16

Magnetic properties and measurements
effect of deposition orientation on the structure and magnetic properties of chemical vapour deposited iron oxide thin films, 240
influence of base pressure on structure and magnetoresistance in sputter-deposited Co/Cu metallic multilayers, 229
Molecular beam epitaxy
organic superlattice film by alternate deposition of single molecular layers, 214
Monolayers
oscillator approach in the mean field model of the highly ordered Langmuir monolayer, 127
transparent conducting cadmium oxide thin films prepared by a solution growth technique, 211
Multilayers
analysis of Ni/Ti multilayers by X-ray diffraction, 79
characterization of WC_x/B_4C multilayers sputtered in reactive argon/methane atmospheres, 57
influence of base pressure on structure and magnetoresistance in sputter-deposited Co/Cu metallic multilayers, 229
vinyl functionalized Langmuir–Blodgett films fabricated from electrically conductive poly (bromooctylthiophene-co-vinylhexylthiophene), 144

Nickel
phase formation in coevaporated Ni–Cr thin films, 37
Niobium
reactive ion etching of Nb thin films for $Nb/Al–AlO_x/Nb$ Josephson tunnel junctions, 245
Nitrogen
study of Co–Cr films deposited by magnetron sputtering under different nitrogen partial pressures, 1
Nitrogen dioxide
conductivity and gas species content of $(AlPcF)_n$ thin films exposed to O_2 or NO_2, 161

Optical coatings
application of pyrosol deposition process for large-area deposition of fluorine-doped tin dioxide thin films, 150
Optical properties
disorders at interfaces: thin film junctions of Ni phthalocyanine and perylenetetracarboxylic dianhydride fabricated by vacuum deposition, 71
infrared response of lead phthalocyanine thin films to chlorine and iodine doping, 268
optical band gap of thin films of $SnSe–SnSe_2$ eutectic alloy, 166
study of porosity of titanium oxide films by X-ray photoelectron spectroscopy and IR transmittance, 117
Organic substances
disorders at interfaces: thin film junctions of Ni phthalocyanine and perylenetetracarboxylic dianhydride fabricated by vacuum deposition, 71
infrared response of lead phthalocyanine thin films to chlorine and iodine doping, 268
Organometallic vapour deposition
Al_2O_3 coatings against high temperature corrosion deposited by metal–organic low pressure chemical vapour deposition, 31
Oxides
properties of thin films of tantalum oxide deposited by ion-assisted deposition, 181
transparent conducting cadmium oxide thin films prepared by a solution growth technique, 211

Phase transitions
evolution processes in multicomponent and multiphase film growth from solutions, 16
oscillator approach in the mean field model of the highly ordered Langmuir monolayer, 127
phase formation in coevaporated Ni–Cr thin films, 37
study of Co–Cr films deposited by magnetron sputtering under different nitrogen partial pressures, 1
Physical vapour deposition
effect of substrate temperature on the microstructure of thin niobium films, 51
Plasma processing and deposition
deposition of copper oxide films by reactive laser ablation of copper formate in an r.f. oxygen plasma ambient, 8
reactive ion etching of Nb thin films for Nb/Al–AlO_x/Nb Josephson tunnel junctions, 245
Polymers
application of multiple coatings to protect polyimide-based X-ray windows from eroding oxygen attack, 259
high frequency impedance analysis of quartz crystal microbalances coated with conducting polymers, 196
immobilization of alcohol dehydrogenase enzyme in a Langmuir–Blodgett film of stearic acid: its application as an ethanol sensor, 138
thermoplastic and spectroscopic properties of amorphous fluoropolymer thin films, 27
X-ray photoemission study of various polyimide cleaning processes before metal deposition, 220
Pyrolysis
application of pyrosol deposition process for large-area deposition of fluorine-doped tin dioxide thin films, 150

Quantum effects
optical band gap of thin films of SnSe–$SnSe_2$ eutectic alloy, 166
Quartz
high frequency impedance analysis of quartz crystal microbalances coated with conducting polymers, 196

Resistivity
on the Van der Pauw method of resistivity measurements, 272

Scanning electron microscopy
reactive ion etching of Nb thin films for Nb/Al–AlO_x/Nb Josephson tunnel junctions, 245
Secondary ion mass spectrometry
organic superlattice film by alternate deposition of single molecular layers, 214
Selenides
optical band gap of thin films of SnSe–$SnSe_2$ eutectic alloy, 166
Semiconductors
amorphous Zn_3P_2 thin films grown by reactive r.f. sputtering, 205
infrared response of lead phthalocyanine thin films to chlorine and iodine doping, 268
optical band gap of thin films of SnSe–$SnSe_2$ eutectic alloy, 166
photoinduced doping of thin amorphous WO_3 films, 156
Sensors
conductivity and gas species content of $(AlPcF)_n$ thin films exposed to O_2 or NO_2, 161
immobilization of alcohol dehydrogenase enzyme in a Langmuir–Blodgett film of stearic acid: its application as an ethanol sensor, 138
Silane
modelling of silicon epitaxy at low pressure, 225
Silicides
study on WSi_2 thin films, formed by the reaction of tungsten with solid or liquid silicon, by rapid thermal annealing, 251
prepatation of tungsten disilicide thin films by laser evaporation, 192
Silicon
high-temperature stability of heteroepitaxial Ir-silicide/SiGe layers co-deposited on Si(100) under ultra-high vacuum, 112
modelling of silicon epitaxy at low pressure, 225
Silver
study of UV light blocking filter materials for ultrasoft X-ray emission spectroscopy of sputtered thin films, 175
Solar cells
study on WSi_2 thin films, formed by the reaction of tungsten with solid or liquid silicon, by rapid thermal annealing, 251
Spectroscopic properties
thermoplastic and spectroscopic properties of amorphous fluoropolymer thin films, 27
Sputtering
study of UV light blocking filter materials for ultrasoft X-ray emission spectroscopy of sputtered thin films, 175
amorphous Zn_3P_2 thin films grown by reactive r.f. sputtering, 205
analysis of Ni/Ti multilayers by X-ray diffraction, 79
characterization of WC_x/B_4C multilayers sputtered in reactive argon/methane atmospheres, 57
control of Y_2O_3-stabilized ZrO_2 thin film orientation by modified bias sputtering, 123
localized corrosion of sputtered Al–1wt.%Si–0.5wt.%Cu alloy thin film, 74
study of porosity of titanium oxide films by X-ray photoelectron spectroscopy and IR transmittance, 117
Stability
high-temperature stability of heteroepitaxial Ir-silicide/SiGe layers co-deposited on Si(100) under ultra-high vacuum, 112
Structural properties
disorders at interfaces: thin film junctions of Ni phthalocyanine and perylenetetracarboxylic dianhydride fabricated by vacuum deposition, 71
effect of substrate temperature on the microstructure of thin niobium films, 51
high frequency impedance analysis of quartz crystal microbalances coated with conducting polymers, 196
Ni–Cu–P and Ni–Co–P as a diffusion barrier between an Al pad and a solder bump, 93
oscillator approach in the mean field model of the highly ordered Langmuir monolayer, 127
Sulphides
XRD, XPS, optical and electrical studies on the conversion of SnS thin films to SnO_2, 85
Superconductivity
control of Y_2O_3-stabilized ZrO_2 thin film orientation by modified bias sputtering, 123
Surface and interface states
disorders at interfaces: thin film junctions of Ni phthalocyanine and perylenetetracarboxylic dianhydride fabricated by vacuum deposition, 71

Surface composition
preparation of tungsten disilicide thin films by laser evaporation, 192
Surface plasmons
photoinduced doping of thin amorphous WO_3 films, 156
Surface structure
influence of substrate on structural properties of TiO_2 thin films obtained via MOCVD, 186

Tantalum
properties of thin films of tantalum oxide deposited by ion-assisted deposition, 181
Tellurium
grain boundary effect in polycrystalline ZnTe films, 104
Tin
study of UV light blocking filter materials for ultrasoft X-ray emission spectroscopy of sputtered thin films, 175
Tin oxide
application of pyrosol deposition process for large-area deposition of fluorine-doped tin dioxide thin films, 150
XRD, XPS, optical and electrical studies on the conversion of SnS thin films to SnO_2, 85
Titanium
ionic conduction in anodic oxide films on titanium in mixed solutions of aqueous electrolytes and diethylene glycol, 99
Titanium oxide
influence of substrate on structural properties of TiO_2 thin films obtained via MOCVD, 186
ionic conduction in anodic oxide films on titanium in mixed solutions of aqueous electrolytes and diethylene glycol, 99
study of porosity of titanium oxide films by X-ray photoelectron spectroscopy and IR transmittance, 117
Transmission electron microscopy
phase formation in coevaporated Ni–Cr thin films, 37
Tungsten
study on WSi_2 thin films, formed by the reaction of tungsten with solid or liquid silicon, by rapid thermal annealing, 251
Tungsten oxide
photoinduced doping of thin amorphous WO_3 films, 156
Tunnelling
reactive ion etching of Nb thin films for Nb/Al–AlO_x/Nb Josephson tunnel junctions, 245

X-ray diffraction
analysis of Ni/Ti multilayers by X-ray diffraction, 79
control of Y_2O_3-stabilized ZrO_2 thin film orientation by modified bias sputtering, 123
effect of substrate temperature on the microstructure of thin niobium films, 51
preparation of tungsten disilicide thin films by laser evaporation, 192
X-ray emission
study of UV light blocking filter materials for ultrasoft X-ray emission spectroscopy of sputtered thin films, 175
X-ray photoelectron spectroscopy
study of porosity of titanium oxide films by x-ray photoelectron spectroscopy and IR transmittance, 117
X-ray photoemission study of various polyimide cleaning processes before metal deposition, 220
XRD, XPS, optical and electrical studies on the conversion of SnS thin films to SnO_2, 85

Zinc
grain boundary effect in polycrystalline ZnTe films, 104
